

# Division of Economic Opportunity

FREDERICK COUNTY  
MARYLAND

## Our Mission

The Division of Economic Opportunity leads Frederick County's vibrant economy by creating innovative and compelling opportunities for residents and businesses. We do this by serving as collaborative partners to streamline processes, access resources and facilitate economic progress.

1

## What is a Data Center?

A data center is a facility that houses equipment and technology for the storage of and access to data and applications. More specifically, it is a physical facility that organizations use to house their critical applications and data.

2

## Types of Data Centers

1. Enterprise
2. Managed services
3. Colocation
4. Cloud

## Data Centers in Frederick County

### Social Security Administration

The data center is responsible for maintaining earnings and benefits information for nearly every American worker, processing 75 million transactions per day. The building was constructed to use 30 percent less energy than the typical data center with LED lighting, a dedicated substation and an efficient heating and cooling system.

### Fannie Mae

Fannie Mae regional data center is a 220,000 sf data center facility that received Fast Track Permitting. With 90,000 sf of office space, a 60,000 sf data center, and a 70,000 sf MEP facility. The facility was designed with redundant utility feeds including electrical, water, and telecommunications. The Fannie Mae Data center was one of the first data centers in the country to receive LEED certification.

# Data Center Industry

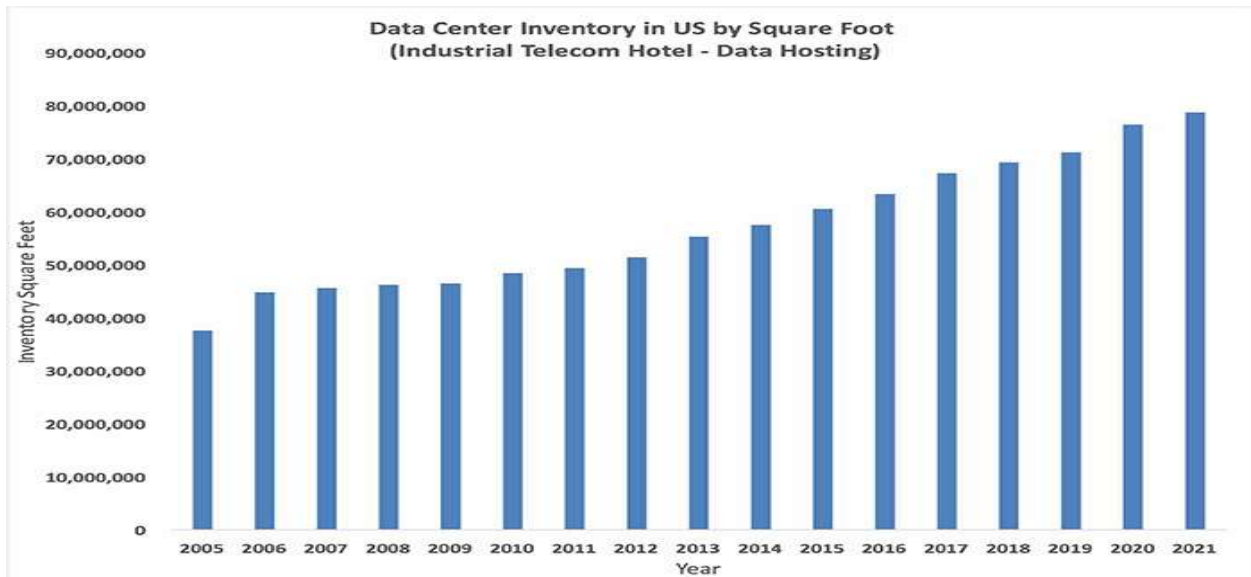

## Trends

1. Real Estate
2. Economic Trends
3. National Economic Impact

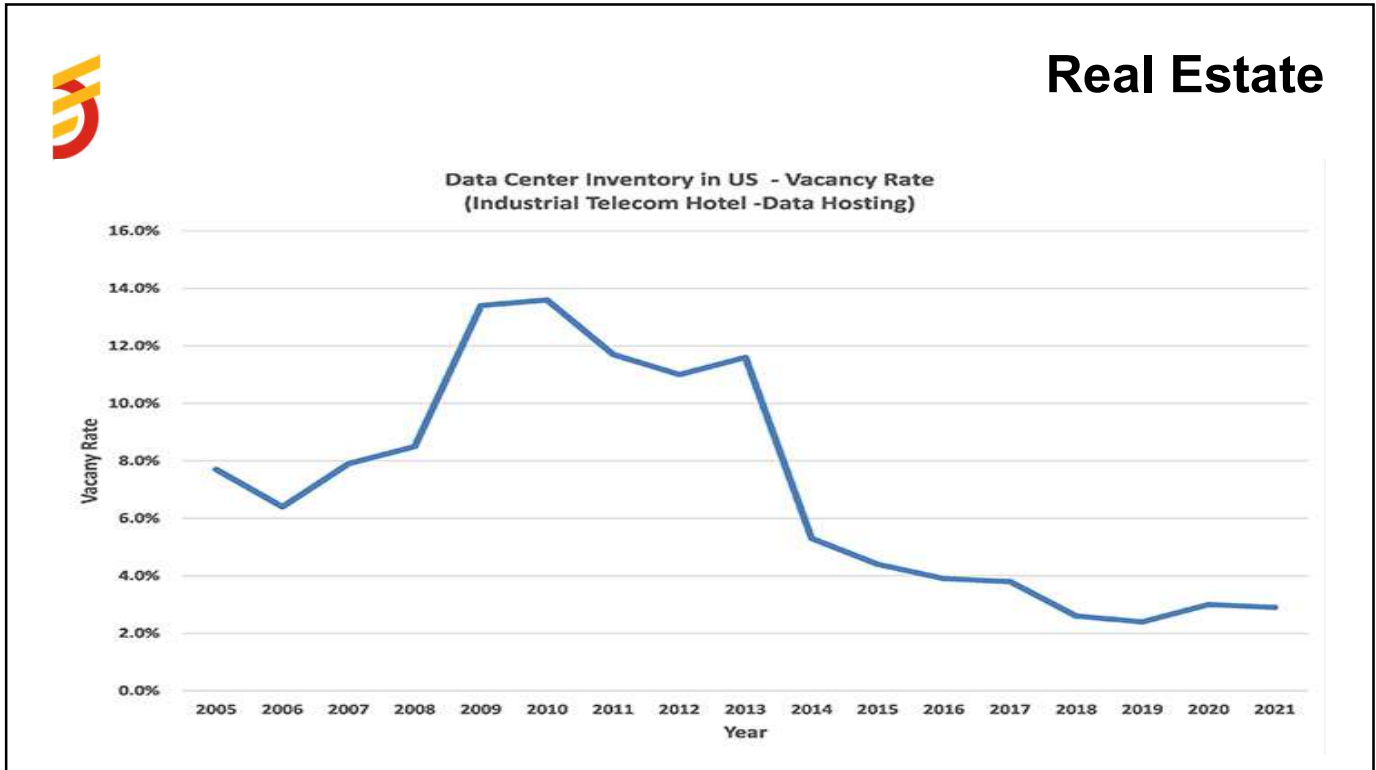

5

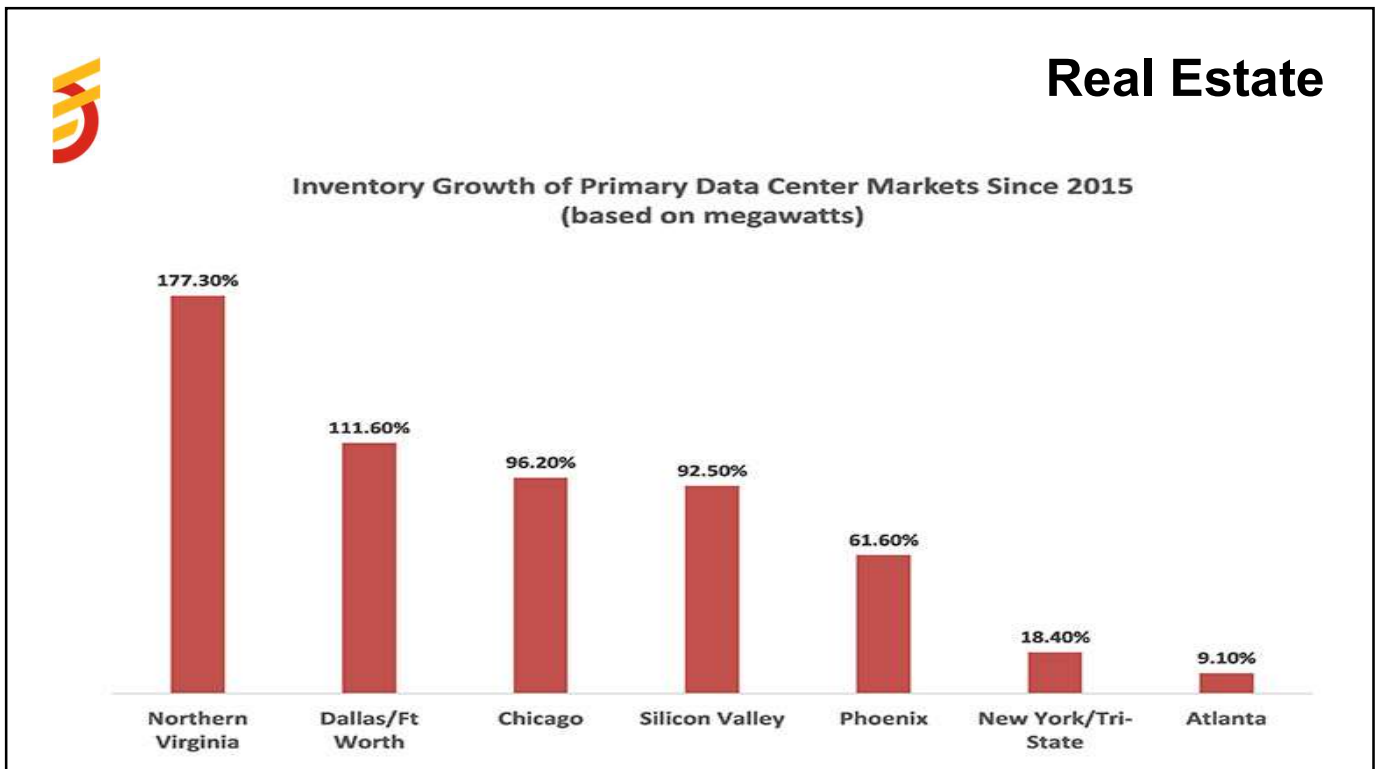

# Real Estate

8

## Co-Location Economics

### IBISWorld

In 2021 the colocation data center industry in the U.S. consisted of:

- \$13.2 billion in revenue
- 535 businesses
- 36,885 employment
- Major companies include Equinix Inc. with 21.2% market share and Digital Realty with 2.5% market share

9

## Impact of Data Centers

### U.S. Chamber of Commerce

- 25 million terabytes
- During Construction: 1,688 local workers are employed and an average of \$243.5 million in output is generated.
- \$9.9 million in revenue for state and local governments
- **43%**

10

## Greening of the Industry

### Energy

- A study published in the journal, Science in 2020 found that through energy efficiency initiatives data centers have been able to grow more sustainably.

### Water

- Data Center industry is looking beyond water management to broader water stewardship by contemplating actions to replenish the water resources they consume and contribute to the overall health of the watershed

### Other Greening

- Greening of the industry ranges from use of renewables, LEED certification, use of sustainable building materials, power, and water usage effectiveness, and more

11

## Key Location Factors

- **20-mile radius and proximity to other data centers**
- **Price of energy**
- **Redundancy of energy/electricity**
- **The availability of green energy**
- **Access to ICT infrastructure – including for proximity to subsea cables that carry information across oceans, to land based fiber, to facilities and equipment along the information chain of transmission, processing, and distribution**
- **Access to engineers and technicians (network specialists, wiring technicians, electricians, heating and air conditioning specialists, security specialists, and more)**
- **Safe external factors – such as low risk for natural disasters and weather**
- **Available land and sites – large site sizes and the ability to acquire and gain local approval**
- **Nearby demand for high volume storage and transmission of data – complementary industries**

12

## Future Vision

### Value Chain

- Cloud and edge computing
- Quantum computing
- Sensors
- Photonics
- Satellite technology
- Internet of Things
- Autonomous vehicles
- Smart Cities and Smart Infrastructure
- Artificial intelligence

13

## Current Project Pipeline
